- Certificates and Appraisals:

XMLSchema, XQuery, XPath - Basic knowledge, <1 years experience

Development Environments:

Visual Studio 2010/2012/2013, Eclipse, SQL Server Management Studio

Source control:

SVN, Git

Other Environments/Methodologies/Tools:

Atlassian JIRA, Scrum

Cisco CCNA 120-200 Modules 1 to 4  
Seavus .NET Training ( Talent program )

Key Professional Experience

FINKI	Internal project: 10.06.2016 – Present
Project title	Master thesis management system
Project description	<p>The system contains about 15 buisness proccess, and includes actions from 6 different roles. It covers the whole procces of applying, managing and completing the statuses of master thesis on Faculty of computer science and engineering.</p> <p>Technologies and tools used: ASP.NET MVC 4, Web API 2, CAS Authentication, Autofac, Entity Framework, SQL, AngularJS, Gulp, Bootstrap, HTML, Git</p> <p>Tags: database modeling, UML, architecture planing, N-Tier architecture, REST architecture, single page application, angularjs, gulp setup</p>
Project duration	ongoing
Customer	Faculty of computer science and engineering
Seavus Development	Junior Developer: 05.18.2015 – Present
Project title	/**/ Eshop
Project description	<p>/**/ Eshop is a standard online shop application. The screens are divided by components: account pages, product catalog and comparison pages, checkout pages and shopping cart. The application is using REST services for communication with the backend part.</p> <p>Technologies and tools used: HTML(5), CSS(3), Bootstrap, AngularJS, jQuery, Gulp, SVN</p> <p>Tags: single page application, angularjs, gulp setup, npm</p>
Project duration	ongoing
Role	Junior developer

Customer	/**/
Project title	Headend admin panel
Project description	<p>Admin panel for Headend device that converts different input signals ( satellite, cable, audio/video, internet ) into specific output signals ( PAL, QAM, IP ). All input signals, regardless of whether they are received, are flexibly and independently distributed from an IP pool to each and every module. The device itself have embedded Linux based web server inside.</p> <p>The application was completly developed using only HTML(5) and AngularJS. The communication between the device and our app was acomplished using the remote procedure call protocol JSON-RPC 2.0. The application itself is consisted of about 50 different screens.</p> <p>Technologies and tools used: HTML(5), CSS(3), AngularJS, Grunt, JSON-RPC 2.0, SVN Tags: single page application, angularjs, embedded, json-rpc</p>
Project duration	3 months
Role	Junior developer
Customer	/**/
Project title	/**/ Marketplace PoC
Project description	<p>/**/ Marketplace is a PoC about app store for the /**/ Platform. It consists of 2 main components. First, Marketplace server. It allows developers to register, login, review other apps and upload their own apps to the store ( developed using the Software Development Kit (SDK) mentioned bellow ). After the apps are verified, they are availbale for purchasing and downloading on the app store.</p> <p>The second component is App store. On the App store, the users of the /**/ Platform, can review, rate and download the apps uploaded and approved on the Markteplace server.</p> <p>Technologies and tools used:ASP.NET MVC 4, ASP.NET Identity, Managed Extensibility Framework (MEF), Entity Framework, SQL, HTML(5), CSS, Bootstrap, KnockoutJS, jQuery, jQueryUI, SVN Tags: MEF setup, single page application, app store, database planing, ORM, UML</p>
Project duration	3 months
Role	Junior developer
Customer	/**/
Project title	SDK PoC for /**/ Platform
Project description	<p>The Software Development Kit (SDK) for /**/ Platform, is a package consisting of binary executable files, documents, examples and project templates, that are essential to build extensions for /**/ Platform. Some of the tasks that this SDK executes are: complete instalation and deploy of the /**/ Platform's apps to the user's machine, configuring user's web server and SQL Server, providing complete envioiremnt for developers to develop and test application packages.</p>

	<p>Automation of the SDK creation for specific version of the /**/ Platform. Powershell script that automates the creation of the SDK for specific version of the /**/ Platform.</p> <hr/>
	<p>Technologies and tools used: Inno Setup, Visual studio Templating (vsix), Powershell, SVN</p> <p>Tags: assembly signing, advanced project templates for VS, automation, windows setup, powershell scripting, pascal scripting</p>
Project duration	3 months
Role	Junior developer
Customer	/**/
